#### **DETAILED ACTION**

1. This Office Action is in response to an RCE entered on 9/29/2010.

#### **Status of Claims**

2. Claims 1-6, 8, 10-17, 25, and 27-29 are pending on this application.

#### **Information Disclosure Statement**

3. The information disclosure statement (IDS) submitted on 9/29/2010 was filed after the mailing date of the Notice of Allowance on 9/14/2010. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

#### **EXAMINER'S AMENDMENT**

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Joseph Oriti on 10/8/2010.

The Examiner has made the following changes to the claims. Additions to the claims are reflected by underline (example) and deletions are reflected by strikethrough (~~example~~).

**Claim 25**

A system for real-time optimization of a search mechanism for a computer which provides search results in response to user queries, comprising:

a processor, comprising:

means for storing satisfaction of users with search results that is determined by an evaluation of the search results by the user;

means for storing interaction of users with the search results obtained in response to a query;

means for determining at least one predictive pattern model for predicting user satisfaction with the search results based on the satisfaction of the user stored in the means for storing and the user interaction stored in the means for storing multiple users interaction to improve search quality, wherein the at least one predictive pattern model is determined by:

running a pre-judged set of results through the search mechanism;

applying a candidate predictive pattern to context-based user behavior data for the pre-judged set of results;

comparing resulting predicted user satisfaction data with judged satisfaction for the pre-judged set of results; and

if the candidate predictive pattern is successful at determining a predicted user satisfaction corresponding to the pre-judged user satisfaction, selecting the candidate

predictive pattern as one of the at least one predictive pattern model;  
means for storing at least one predictive pattern model;

means for applying said predictive pattern model to context-based user behavior data comprising user feedback data and context data associated with user's feedback data, the context-based user behavior data acquired after receipt by a user of the search results of said application of said predictive pattern model further comprises isolating a set of said performed queries which are unsatisfactory and which share a common characteristic in order to identify problems which appear for multiple users or queries; and

means for outputting predicted user satisfaction data which is indicative of a level of satisfaction experienced by users of search results returned by the search mechanism, the outputted predicted user satisfaction data based on the application of said predictive pattern model.

#### **Reasons for Allowance**

5. The following is an examiner's statement of reasons for allowance: claims 1-6, 8, 10-17, 25, and 27-29 are considered allowable since none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims, and particularly: "running a pre-judged set of results through the search mechanism" "applying a candidate predictive pattern to context-based user behavior data for the pre-judged set of results", "comparing resulting predicted user satisfaction data with judged satisfaction for the pre-judged set of results, "...isolating a set of said performed queries which share a common

characteristic in order to identify problems which appear for multiple users or queries” as described in claims 1, 10 and 25.

Biebesheimer et al. (US PG PUB No. 2002/0152190) discloses a customer self-service system for resource search and selection that provides a response set based on user queries and derived user context. The system applies resource indexing functions to map user queries to searchable resources. The self service system includes a database of user interaction records including actual resources selected by the users. A supervised learning algorithm receives user interaction data from the database of user interaction records and resources from a resource library for adapting the resource indexing functions based on a history of user interactions with the system.

Biebesheimer and all other prior art of record either alone or in combination fail to fairly teach the combination of limitations of the claimed invention without unduly motivating one of ordinary skill in the art to exert substantial experimental effort to integrate such combination concepts.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

#### **Conclusion**

6. Claims 1-6, 8, 10-17, 25, and 27-29 are allowed.
